

ABSTRACT

A sanitary napkin comprising a fluid permeable topsheet, a fluid permeable backsheets, and an absorbent core disposed therebetween is disclosed. The sanitary napkin can be a pantiliner. The absorbent core comprises relatively hydrophilic material defining a core outer periphery. The topsheet and the backsheets comprise relatively hydrophobic nonwoven material, at least one of the topsheet and the backsheets defining a sanitary napkin outer periphery that is substantially larger than the core outer periphery. The area between the core outer periphery and the sanitary napkin outer periphery is a breathable zone. The sanitary napkin further comprises a fluid impermeable barrier between the backsheets and the absorbent core, the fluid impermeable barrier being disposed within the core outer periphery.
